01	Installation	Import into NinjaTrader 8
02	The Indicator	Draw risk/reward on the chart
03	The Strategy	Automated execution engine
04	Key Features	Side-by-side reference
05	Support	Help and contact

Workflow

01 | Installation

The toolkit ships as one or two NinjaScript files: the **Indicator** (drawing tool) and the **Strategy** (execution engine). Follow these steps once — both install the same way.

- 1 Open NinjaTrader 8**
Launch the platform and wait for your workspace to load.
- 2 Open the Import dialog**
From the **Control Center**, go to **Tools** → **Import** → **NinjaScript Add-On...**
- 3 Select the files**
Browse to the **.zip** file you received and click **Open**. NinjaTrader will compile the code automatically.
- 4 Restart NinjaTrader**
Close and reopen the platform so the new components are fully registered.
- 5 Verify installation**
Open any chart. The Indicator will appear under **Drawing Tools**; the Strategy under **Strategies** when you open the Strategies window.

Important

If the import fails, make sure you are importing the **.zip** file as delivered — do not unzip it. NinjaTrader requires the archive as-is.

02

The Indicator

Drawing Tool — Visual Risk & Reward

The Indicator lets you draw a full risk/reward plan directly on the chart with three draggable anchors: **Entry**, **Stop**, and **Target**. Position size, R multiples, and dollar risk are calculated live as you move the lines.

HOW TO PLACE IT

- 1 Right-click any chart and choose **Drawing Tools** → **Advanced Risk Reward V1 by Luis Garrido**.
- 2 Click on the chart to place the **Entry**, then the **Stop**, then the **Target**.
- 3 Drag any of the three anchors to recalculate risk, reward, and position size in real time.

WHAT YOU CAN DO WITH IT

- **Auto Order Quantity.** Enter your dollar risk and let the tool size the position automatically.
- **PRO Mode.** Enables **Track Last Price** and **FLEX / HARD stop** modes for live adjustment.
- **On-chart buttons.** **FLIP**, **AUTO CALC**, **AUTO TRACK**, **SOURCE**, **STOP MODE** all from the chart.
- **TP Partial Labels.** Multiple reward levels (1R, 2R, 3R...) with exact price labels.
- **Collapsible panel.** Use the arrow buttons to collapse the floating panel for a cleaner chart.
- **Show On Hover.** Buttons hide by default and appear when you hover over the tool.

*Plan every trade visually. The chart **becomes** your risk management dashboard.*

03

The Strategy

Execution Engine — Automated Orders

The Strategy reads the Indicator's anchors in real time and submits **live orders** with full bracket management. It injects a custom panel directly into the NinjaTrader ChartTrader, so everything is one click away.

HOW TO ACTIVATE IT

- 1 Open the **Strategies** window from your chart's properties.
- 2 Add **DrawingToolSyncStrategy** to the list.
- 3 Configure your account, instrument, and parameters.
- 4 Click **Enable**. The custom panel will appear on your ChartTrader.
- 5 Place the Indicator on the chart — the Strategy will sync automatically.

WHAT YOU CAN DO WITH IT

- **Entry Order Types.** Market, Limit, Stop-Limit, Stop-Market — configurable per trade.
- **TP Selector.** Choose **1RR**, **Last RR**, or **NoTP** on the fly.
- **AUTOPILOT mode.** **Aggressive** (trail 1 level) or **Runner** (trail 2 levels). One-way ratchet — never loosens.
- **COVER button.** Instantly close part or all of your position with one click.
- **MAGNET toggle.** Snap stop / target lines to key chart levels.
- **Quick buttons.** **BreakEven**, **Stop±**, **TP±** for rapid in-trade adjustments.
- **Trade Stopwatch.** Live time-in-trade counter on every position.
- **Risk-Reward Status.** Dedicated panel section showing current R, P&L, and targets.

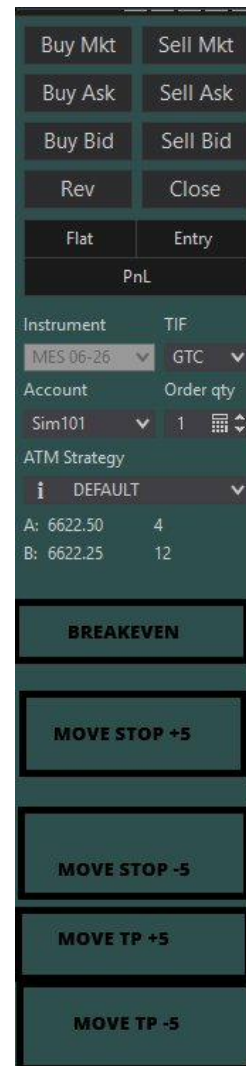

Figure 2 — Custom ChartTrader panel.

*From chart to order in one click. **Full control**, zero manual calculation.*

04 | Key Features at a Glance

A side-by-side reference of what each component delivers.

Indicator	Strategy
✓ 3-anchor visual R/R plan	✓ Automated bracket orders
✓ Live position sizing	✓ Custom ChartTrader panel
✓ PRO mode + price tracking	✓ AUTOPILOT trailing logic
✓ On-chart action buttons	✓ One-click COVER exits
✓ TP partial labels (1R–NR)	✓ BE / Stop± / TP± buttons
✓ Collapsible panel	✓ Live R and P&L tracking

PRO TIPS

Start simple

Before enabling AUTOPILOT, practice placing the Indicator alone to get a feel for the R/R workflow.

Match TP selector to the setup

Use **1RR** for scalps, **Last RR** for swing targets, **NoTP** when discretion rules the exit.

Use PRO Mode selectively

Track Last Price is powerful for breakouts but can be noisy on ranging markets.

Combine COVER with AUTOPILOT

Close half a position with COVER, then let AUTOPILOT trail the remainder.
